Objective

I am a software developer with diverse experience in various technologies. With expertise in ReactJS, Next.js, MongoDB, Node.js, Firebase, React Native, Laravel, I have built many web applications ranging from simple to complex. I always enjoy continuing to learn new technologies to enhance my skills.

Skills

Code Skill

- Using Reactjs, redux, nextjs, nodejs,react native, nestjs, vuejs.
- Using RxJS to handle asynchronous data streams and events in JavaScript.
- Using Electronjs to develop desktop application.
- Using design template: Material Ui, Antd, Tailwind Css, Bootstrap
- Using socket, firebase for realtime.
- Using Nextauth to sign in with google, facebook,...
- Using payment online: VNpay, Momo
- Use AI in my work and review the source code generated by AI.
- Use AWS S3 for save file, image

English

- Ability to write and read English documents

Personal skills

- High self-learning ability
- Ability to work in groups
- Ability to solve problems yourself

Education

SaiGon Technology University (STU) | 2020 - 2024

Information Technology

- Graduated from university with a GPA of 8.0.
- Won runner-up in a university IT competition

Work experience

NewStarPaper Company | 02/2022 - 04/2023

Fullstack Developer (Fresher)

- Design website interface using nextjs, redux, material UI.
- Design mobile app (Android, IOS) using react native, redux, using firebase to push notification.
- Create User permission management system
- Technology: Nextjs, Nodejs, Redux, Mongodb,

Unique Technology Company | 5/2023 - 12/2024

Full Stack Developer

- Description: Comm.care allows you to create statewide MDS/HACC services, and generate reports to upload to the funding body in a minute!
- Responsibility:
    - Change Sendinblue to postmark

- Learn other programming languages quickly
- Using AI for coding, review code AI to produce the final version.

- Intergrate web service: Active campaign, DEX
- Create new calendar
- Fix bug and create new function in nestjs
- Fix automation testing (cypress, jestjs)
- Using RxJS:
    - Created and composed **Observables** using **pipe**() to build reusable asynchronous processing pipelines.
    - Integrated external services such as **ActiveCampaign and DEX** using NestJS HttpService and RxJS Observables.
    - Transformed and normalized asynchronous API responses using operators such as **map** and **tap**.
    - Combined multiple independent API requests using **forkJoin** and coordinated dependent asynchronous operations using **switchMap**.
    - Managed concurrent and sequential operations with **mergeMap** and **concatMap** when processing multiple data sources and business workflows.
    - Implemented centralized reactive error handling with **catchError.**
    - Improved reliability of external API integrations using **retry** and **timeout** strategies.
    - Used **filter**, **debounceTime**, and distinctUntilChanged to control and filter data/event streams where required.
- Technology: Nextjs, Nestjs, Redux, Mongodb, Jestjs, Rxjs, Cypress, Aws

FPT Software | 1/2025 - 8/2026

Fullstack Developer

- Description: This project focuses on job searching in Japan, helping users easily find jobs related to their expertise.
- Responsibility:
    - Responsible for the job-seeking component of the project (the core part)
    - Update the job analysis page tailored to the user.
    - Increase the SEO rate for the project
- Technology: Nextjs, Java, Css

Freelancer | 02/2022 - Current

Freelancer

- Using some technology: Laravel, Nextjs, Vuejs, Nodejs, Mongodb, MySql, Tailwind css, Antd, MUI, bootstrap to create some project: Food ordering system, Web service for selecting beauty appointments, Web booking platform, Web google map to show parcel land
